

Q & A

Questions that couldn't get answered due to time-constraint.

Question [Rustam Borzo] : **How do you think can AI-powered Scrum Masters replace real ones? And what a scrum master should do then? Become an AI Operator of Scrum Masters?**

Jurgen Appelo: People must separate knowledge from wisdom. AI-powered Scrum Masters can provide the knowledge (What is Scrum? What are the options?)

Human Scrum Masters should focus on wisdom and insights. (What is the best thing to do in this context, with these people, in this situation?)

Question [Imani S.] : **Is the field of project management hiring going to decrease with less job growth and more competition? What type of PM would thrive in this new industrial revolution?**

Jurgen Appelo: No, I think there will be more projects than ever, thanks to AI. Some of those can be managed by AI. Most will be managed by humans.
